ALISA OMELCHENKO

347-570-5722 | User ID: alo90@pitt.edu | Github.com/AlisaOmel

EDUCATION

CMU-Pitt Joint Computational Biology: Pittsburgh, Pennsylvania *Sept 2022- Present*
PhD in Computational Biology

NYU Tandon School of Engineering: Brooklyn, New York *Graduated May 2018*
M.S. Biotechnology *GPA:3.94*
B.S. BioMolecular Sciences (Magna Cum Laude) *GPA: 3.61*

SKILLS

Computer Languages: Python, R, Bash, Matlab (beginner)
Laboratory Skills: Electrophoresis, PCR, ELISA, Western blot, flow cytometry, calcium imaging, immunostaining, and molecular cloning
Computer Laboratory Skills: Machine Learning (Language Models), Multi-omic Network Analysis (Taiji, HotNet2, BIONIC), protein modeling and visualization (Alphafold2, openMM, pymol, ICM Pro), ImageJ/FIJI, fMRI analysis and data visualization

RESEARCH EXPERIENCE

CMU-Pitt Joint Computational Biology: Graduate Student *Sept 2022-Present*
Advised by: Jishnu Das
- Develop an interaction-based vocabulary language model to predict peptide macromolecular interactions and perturbations collaboratively.
- Integrate multi-omic datasets and perform network-based analysis to elucidate state or disease specific modules and drivers.
- Investigate human-viral coevolutionary effects on protein networks, immunomodulation, and disease severity.

Virginia Tech School of Neuroscience Ni Lab: Laboratory Manager *July 2019-July 2022*
Advised by: Lina Ni
- Created an ImageJ plugin to automate data extraction and processing of experiments.
- Identified the function, molecular components, and properties in the thermosensory pathway of *Drosophila* larvae.
- Generated new fly strains for analysis of gene function through molecular cloning and recombination.

Landos Biopharma: Laboratory Technician July *2018- July 2019*
Advised by: *Josep Bassaganya-Riera*
- Identified the mechanism of action for drugs through evaluation of differentially expressed gene (DEG) patterns.
- Collected and analyzed data from necropsies, cell cultures, flow cytometry, ELISA, and western blots.
- Handled, monitored, and performed routine medical treatments on mice, rats, and pigs.

NYU Langone Health: Volunteer Researcher *April 2018-June 2018*
Advised by: Timothy J. Cardozo
- Designed structure and evaluated stability of antibody eliciting epitopes for staph database and future staph vaccines.
- Analyzed sequences and alignments to predict protein structures through homology modeling of proteins not in the PDB.

Nathan Kline Institute: Research Assistant *September 2016- May 2018*
Advised by: Cameron R. Craddock
- Determined functional similarities of the brain between healthy individuals with comparable personality traits.
- Mapped cluster differences of fMRI data on brain templates visualize subgroup differences in brain activation.
- Assessed the quality of 225 skull-stripped brain images and manually edited them.

Child Mind Institute: Volunteer Research Assistant *September 2016-May 2018*
Advised by: Steven Giavasis
- Improved the speed, usability, and statistical implementation of Python scripts used by the institute.
- Enhanced a Python script to utilize a Docker container and parallelize the data processing increasing the speed by 30%. The script is included in the current version of C-PAC software.

ACHIEVEMENTS

Presentations:

SWING- A generalizable language model for protein and peptide interactions, Oral Presentation at: Centers of Systems Immunology Retreat, September 2023

Ionotropic Receptor-dependent warm cells in *Drosophila* larvae, Oral Presentation at: VT School of Neuroscience: Summer Research Retreat, August 2020

Poster's:

Omelchenko A. A., Siwek, J, Chhibbar, P., Rosengart A., Koes D.,, Joglekar A., Das, J., A generalized language model for predicting perturbations of protein-protein and MHC:Peptide interactions. Poster presented at: 21st Annual Immunology Retreat, October 2023.

Omelchenko, A. A., Tyrrell, J. J., Wilbourne, J. T., & Ni, L. Ionotropic Receptor-dependent dorsal organ warm cells mediate warm sensing in Drosophila larvae. Poster presented at: SfN, November 2021; Virtual

Tyrrell, J. J., Wilbourne, J. T., **Omelchenko, A. A.**, Yoon, J., & Ni, L. Ionotropic Receptor-dependent cool cells control the transition of temperature preference in flies. Poster presented at: VT Molecular and Cellular Biology Summer Event, August 2021; Blacksburg, Virginia.

Publications:

Relevant Graduate Coursework:

- 10-701 Introduction to Machine Learning (CMU)
- Genomics (CMU)
- Cellular and Systems Modeling (PITT)
- Computational Structural Biology (PITT)
- Essential Mathematics and Statistics for Scientists (CMU)
- Computation for Data Science I (Virginia Tech)
- Problem Solving in Genetics, Bioinformatics, and Computational Biology (Virginia Tech)
- Computer aided Drug design (NYU)
- Protein Engineering (NYU)
- Biocatalysts (NYU)
- Biosensors and Biochips (NYU)
- Immunology (NYU)

Recognition:

Centers of Systems Immunology Winning Abstract 2023
Dean's List- Awarded for academic achievement 3 years in a row 2015-2018
Trio Scholar—2013-2018
STEM Women in Engineering Scholarship—2013-2018

Extracurricular Activities:

Baking Blog (@doughntworrybakehappy, doughntworry.com) – September 2018-Present
All Together Now Community Theater Cast Member – September 2021-Present
VT Ballroom Dance Club Member – September 2019-January 2020, September 2021-Present
NYU Ballroom Dance Team – 2013-2015
